Paediatric Anaesthesia Workshop: Paediatric Airway Workshop

Workshop Fee: 90 USD

Basic principles and advanced techniques negotiating simulated difficult Paediatric airways will be demonstrated. Comparing blades for direct laryngoscopy, channelled and non-channelled & pros and cons in paediatric population. Unique features and techniques for intubation in children will be demonstrated.

Paediatric Anaesthesia Workshop: Monitoring EEG in Paediatric Anaesthesia

Workshop Fee: 10 USD

For this child, at this particular moment, how much anaesthesia should I give? Determining drug requirements in paediatric anaesthesia is challenging, as children can have a more variable response to drugs compared to adults, depending on their age, developmental stage, co-morbidities, and neurodevelopmental status. The brain is the primary site of action for sedative-hypnotic drugs, yet it is not routinely monitored during general anaesthesia or sedation in children. This is likely due to the fact that until recently, physiologically principled approaches for anaesthetic brain monitoring have not been well articulated. Our knowledge of anaesthetic brain mechanisms has developed rapidly in recent years. We now know that anaesthetic drug effects that are clearly visible in the electroencephalogram (EEG) reflect underlying anesthetic pharmacology and brain mechanisms, in both adults and children. Recent clinical data have shown that anaesthesia-induced isoelectric events are prevalent in children receiving general anaesthesia. Anaesthesia-induced isoelectricity is a state of oversedation beyond what is required to maintain unconsciousness, suggesting that current models of anaesthetic management often predispose children to oversedation.

In this workshop, we will illustrate how EEG monitoring can be used to guide anaesthetic management in paediatric
patients and improve patient safety. We will begin by reviewing how drug-specific and dose-dependent EEG signatures seen in adults are visible in children and infants, including those with neurodevelopmental disorders. We then discuss the clinical evidence that the existing model of anaesthetic dosing in children, which does not use the EEG, leads to unnecessarily deep anaesthesia. We will discuss the practical aspects of EEG monitoring in paediatric anaesthesia, including its applications and limitations, as well as how to troubleshoot problems during monitoring. Finally, we review detailed case studies which illustrate how the EEG can be used to guide anaesthetic management and enhance patient safety.

1. Understand age-dependent changes in anaesthesia-induced brain activity in infants and children, and how this activity relates to development of underlying brain circuits.
2. Understand the prevalence of isoelectric events in infants and young children undergoing general anaesthesia and how to identify and prevent these.
3. Understand the practical applications and limitations of EEG monitoring.
4. Understand how EEG monitoring can be used to guide anaesthesia care in infants and children.

**Monitoring EEG in Paediatric Anaesthesia**

*Patrick Purdon, United States*

PROGRAMME
Tuesday, March 05, 2024

Session Date/Time: Tuesday, March 5, 2024 - 08:15 - 09:45
MR 325 (Level 3)
Paediatric Anaesthesia Workshop: POCUS and US Guided Regional Anaesthesia Workshop
Workshop Fee: 150 USD

1. Learn US guided POCUS exam including but not limited to cardiac, lung, gastric and venous access.
2. Transthoracic ECHO for quick cardiac examination.

Chair: POCUS and Regional Anaesthesia
Santhanam Suresh, United States

POCUS and Regional Anaesthesia
Ban Tsui, United States

POCUS and Regional Anaesthesia
Manoj Karmakar, Hong Kong

POCUS and Regional Anaesthesia
Aruna Parameswari Sundaram, India

Session Date/Time: Tuesday, March 5, 2024 - 08:30 - 09:30
MR 336 (Level 3)
Paediatric Anaesthesia PBLD: Emergency Laparoscopy in Pierre Robin Syndrome
PBLD Fee: 20 USD

2 month old male, 4.5 kg, scheduled for emergency laparoscopy for potential bowel obstruction. Diagnosis of Pierre Robin sequence at birth. Child was fed formula about 1 hour ago, and appears to be slightly diaphoretic.

1. How will you induce anaesthesia?
2. Is RSI Indicated?
3. What equipment is needed for the safe delivery of anaesthesia?
4. Can you do this under regional anaesthesia?

Emergency Laparoscopy in Pierre Robin Syndrome
Thomas Engelhardt, Canada

Session Date/Time: Tuesday, March 5, 2024 - 08:30 - 09:30
MR 336 (Level 3)
Paediatric Anaesthesia PBLD: Laparoscopy for a Child with Fontan Circulation
PBLD Fee: 20 USD
8 year old with Fontan Circulation for single ventricle, presents for emergency laparoscopic Appendectomy under general anaesthesia.

1. What hemodynamics is needed to be monitored for the child before induction of anaesthesia?
2. Technique for induction and maintenance of anaesthesia
3. What monitoring is needed intraoperatively?
4. Does the child need to be transferred to the ICU for postoperative care?

Laparoscopy for a Child with Fontan Circulation
Walid Habre, Switzerland

Session Date/Time: Tuesday, March 5, 2024 - 08:30 - 09:30
MR 335 (Level 3)
Paediatric Anaesthesia PBLD: Paediatric Massive Haemorrhage Management
PBLD Fee: 20 USD

6 months old child undergoing cranyosynostosis. Strategies for blood management and transfusion strategies will be discussed.

Paediatric Massive Haemorrhage Management
Susan Goobie, United States
Paediatric Massive Haemorrhage Management
Heidi Meyer, South Africa

Session Date/Time: Tuesday, March 5, 2024 - 08:30 - 09:30
MR 335 (Level 3)
Paediatric Anaesthesia PBLD: The Foreign Body at Midnight: Should I Sleep, or Should I Go?
PBLD Fee: 20 USD

2 year old with severe wheezing and coughing presents at 10 PM to the ED, history of choking while eating peanuts in the evening. Suspect a FB in the airway. Chest X-Ray shows diffuse atelectasis.

1. Should we proceed with a bronchoscopy now or wait for the morning?
2. Can a RSI be performed on this child?
3. If mask induction, does NPO status matter?

The Foreign Body at Midnight: Should I Sleep, or Should I Go?
Laszlo Vutkits, Switzerland

Session Date/Time: Tuesday, March 5, 2024 - 13:00 - 14:00
MR 335 (Level 3)
Paediatric Anaesthesia PBLD: Chronic Pain Management
17 year male s/p right below elbow amputation presents to your pain clinic with severe refractory complex regional pain syndrome. Current medications include high dose opioids, gabapentin, amitriptyline, and acetaminophen.

1. What other modalities can be provided for pain control?
2. If neuromodulation is an option, is peripheral neuromodulation or central neuromodulation a better option?
3. Could this have been prevented at the time of surgery?

Chronic Pain Management
James Rathmell, United States

Chronic Pain Management
Santhanam Suresh, United States

Session Date/Time: Tuesday, March 5, 2024 - 13:00 - 14:00
MR 335 (Level 3)
Paediatric Anaesthesia PBLD: ICU/ECPR Initiation

6-year-old s/p major bowel resection and small bowel transplantation, in step down ICU has severe hypotension, and is now in severe sinus bradycardia, CPR is initiated. After several doses of epinephrine, patient is now in refractory ventricular tachycardia.

1. When do we initiate ECPR in these children? What criteria is needed for ECPR?
2. What equipment is needed and how do we proceed?
3. What protocol needs to be set up for ECMO initiation in hospitals?

ICU/ECPR Initiation
Thomas Shanley, United States

ICU/ECPR Initiation
Ken Brady, United States

Session Date/Time: Tuesday, March 5, 2024 - 13:00 - 14:00
MR 336 (Level 3)
Paediatric Anaesthesia PBLD: Pain Control in Difficult Situations

14 year with end stage osteosarcoma of right femur now scheduled for above knee amputation. Patient on methadone 10 mg bid, Oxycontin every 6 hrs, gabapentin 400 mg qid, acetaminophen 600 mg every 6 hrs.

1. How do we manage his perioperative pain?
2. What opportunities do we have for regional anaesthesia?
3. Can we prevent phantom pain in this patient?
4. Do we need to scale down his pain meds before surgery?

Pain Control in Difficult Situations
Ban Tsui, United States

Pain Control in Difficult Situations
Manoj Karmakar, Hong Kong

**Paediatric Anaesthesia Workshop: Implementing Research and Publications in Settings with Limited Resources**

Workshop Fee: Complimentary

This workshop will help novice researchers understand the fundamental requirements for good quality research with a focus on understanding the impact you wish to make with your research, the importance of defining a research question which is relevant and novel, and then the basic ingredients needed to answer that question. These fundamental principles are applicable to all settings but are especially important where resources are limited.
